

Watch Dog Pro v2.0

2-camera video surveillance software for Windows™

WatchDog Pro is the entry-level member of the Remote Eyes product family. Based on the same software architecture used in Odyssey Technologies, Inc.'s industry-leading Remote Eyes Servers, WatchDog Pro converts any existing PC into a commercial grade local and remote video surveillance system. WatchDog Pro shares all major features of the higher-end Remote Eyes Servers with the exceptions of PTZ camera control and external hardware inputs and outputs.

WatchDog Pro is ideal for home automation and small business video surveillance applications requiring only one or two cameras. WatchDog Pro is a preferred solution over standalone DVRs because it is a software only implementation and does not require the end customer to install an additional hardware device.

For customers with existing cameras, WatchDog Pro can be purchased as software only or bundled with VideoBus adapters which convert BNC camera inputs into USB port compatible signals.

For customers requiring commercial quality fixed security cameras, WatchDog Pro can be purchased bundled with one or two fixed bullet cameras, AC adapters, cables, and VideoBus adapters.

For home automation users desiring alternative cameras, WatchDog Pro can be purchased bundled with either one or two firewire cameras and accompanying PCI or PCMCIA adapters or one or two wireless cameras with VideoBus adapters.

Product Features

- > **Windows 2000 and XP compatible software**
- > **Includes FREE remote client software**
- > **Compatible with Remote Eyes Multi-View Client v2.0**
- > **Two fixed camera inputs (USB ports or PCI adapters)**
